

KEY WORDS AND PHRASES FOR BACTERIAL CELL WALL CONCEPT MAP

adhesins
coagulation pathway
complement pathways
cytokines
gram-negative cell wall
gram-positive cell wall
inflammation
penicillins, cephalosporins, glycopeptides, bacitracin
INH, ethambutol
invade host cells
layer of arabinogalactan
lipoprotein
mycolic acids and other glycolipids
numerous layers of peptidoglycan
osmotic lysis
outer membrane
porins
phospholipids
pattern recognition receptors (PRRs) on defense cells
prevents osmotic lysis
stains pink with gram stain procedure
stains red with acid-fast stain procedure
surface proteins
