

Dormant resistant survival forms produced by *Bacillus* and *Clostridium* species that resist high temperatures, most disinfectants, low energy radiation, and drying best describes:

1. a glycocalyx
2. an endospore
3. a capsule
4. An integron

Obligate aerobe, often lives in the soil, and produces endospores. This best describes the genus:

1. *Bacillus*.
2. *Clostridium*.
3. *Mycobacterium*.
4. *Mycoplasma*.
