

1. Unencapsulated masses of lymphoid tissue containing fixed macrophages and ever changing populations of B-lymphocytes and T-lymphocytes and located in the respiratory and gastrointestinal tracts describes:

A. the spleen.

B. lymph nodes.

C. lymph nodules.

2. Tissue fluid picks up microbes, enters the lymph vessels as lymph, and then enters _____ where antigens are exposed ever-changing populations of circulating to B-lymphocytes and T-lymphocytes.

- A. the spleen.
- B. lymph nodes.
- C. lymph nodules.

3. Blood carries microorganisms to _____ where antigens are exposed ever-changing populations of circulating to B-lymphocytes and T-lymphocytes.

A. the spleen.

B. lymph nodes.

C. lymph nodules.
