

1. \_\_\_\_\_ are antibodies that can stick microbes to phagocytes for opsonization.

- A. IgG and IgE.
- B. IgG and IgM.
- C. IgG and IgA.
- D. IgA and IgM.
- E. IgG and IgD.

2. Both IgG and IgM can promote opsonization by:

- A. Sticking microbes directly to phagocytes.
- B. Sticking microbes directly to CTLs.
- C. Activating the classical complement pathway to generate C3b and C4b.
- D. Sticking microbes to mast cells and basophils.

3. \_\_\_\_\_ is able to stick eosinophils to parasitic worms.

A. IgG.

B. IgA.

C. IgM.

D. IgE.

E. IgD.
