HW6-3 Soln)

The easiest thing to do is remember that the area under this curve is the work:

W = area =
$$\frac{1}{2}$$
bh = $\frac{1}{2}$ (3)(15) = $\frac{22.5 \text{ Joules}}{2}$.

Then, use the work-energy theorem:

$$W_{TOTAL} = \Delta K = \frac{1}{2} m v_f^2 - \frac{1}{2} m v_i^2$$

starts from rest

$$v_f = \sqrt{\frac{2W_{TOTAL}}{m}} = \sqrt{\frac{2(22.5)}{3}} = \frac{3.78 \text{ m/s}}{.}$$
