

**28.13.** A wire carrying a 28.0-A current bends through a right angle. Consider two 2.00-mm segments of wire, each 3.00 cm from the bend (Fig. 28.38). Find the magnitude and direction of the magnetic field these two segments produce at point  $P$ , which is midway between them.

Figure **28.38** Exercise 28.13.
